

QR codes to try out the 3DQR app for iOS and Android

1. Download the 3DQR app with your tablet or smartphone and open it
2. Scan a QR code with the 3DQR app and press the play button
3. experience Augmented Reality

Demo Code: Alternator

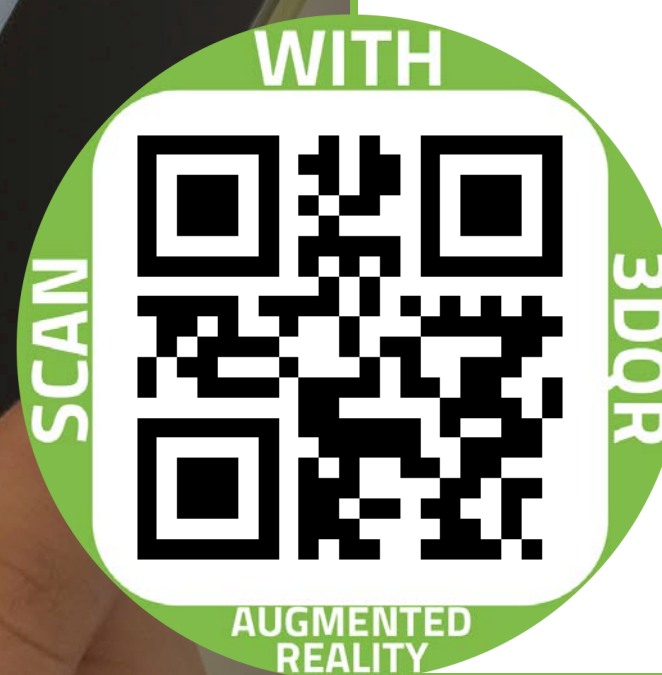

You can move single parts of the alternator by dragging a part across the touchscreen with your finger. Despite that it is possible to pinch to zoom to enlarge the modules.

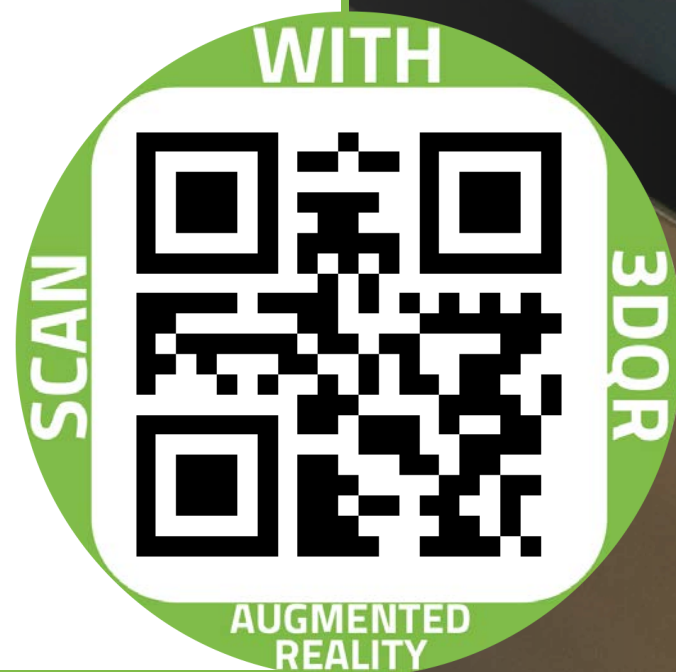

Demo Code: Turbine

You see a scaled model of a turbine with symbolic representations of possible additional data. Some parts are highlighted by a blinking effect.

Demo Code: Interactive Printer

You can touch the display to open the printer. Additionally you can change the previewed pictures and print the current one out by pressing a button.

The patent pending connection between common QR codes and high end visualization technology that makes the use of augmented reality finally easy and flexible.
